

Implementing Neural Network class (nn)

Neuron

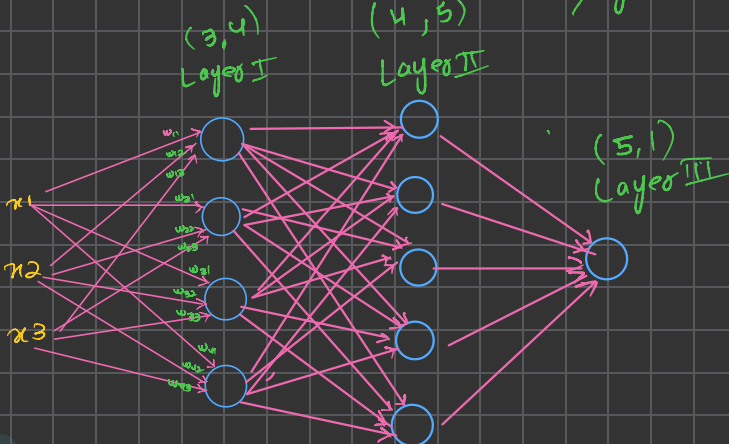

Layer

$$\text{parameter} = \left(\underset{\substack{\uparrow 3 (x_1 x_2 x_3)}}{\text{nin}} \times \underset{\substack{\uparrow \text{neut}}}{\text{neut}} \right) + \text{neut}$$

MLP

$$\text{layer I} = (\text{layer}^{(I-1)}[i], -)$$

Imp pt:- Generally only hidden lay.
ex₂ have act. funⁿ but
last layer where logits
are found, we do not
apply act. funⁿ.
